

to determine the density of corn (Zea Mays) pollen. 1.14×10^3 kg/m³ with an absolute error of 0.05×10^3 kg/m³.

- Pollen, viruses, bacteria etc.
- Transport of pollen > cross-fertilization
- Prediction of pollen dispersal

A method for measuring the density of irregularly shaped aerosol particles such as pollen

BIOCOMPLEXITY

Instrumentation to measure the emission and transport of biological aerosols in the atmosphere: Linking across scales from microns to kilometers
